

Power

115/1

Waveform Generator capable of generation of complex waveforms including epked waveforms. Output is single phase with a frequency range of 5-2,000,000 Hz. Generator may also modify the waveform as necessary, or may provide a time period at zero voltage.

Amplifier increases the voltage level and is adjustable from 0 - 220 volts. Wave shape or phase angle is not affected by the amplification.

Multiple Output Phase Shifter capable of generating multiple phase outputs varying from 1 phase to 6 phase. The total number of degrees of phase shift between individual outputs is independently variable on each output.

Transformer increases the output voltage of the amplifier to a maximum voltage of 40,000 volts. This increase is possible with no significant effect on the wave shape or phase angle.

output 12 phase
